

PhaseLink Announces Investment From Intel Capital

Fremont, California – June 5, 2006 – For Immediate Release

PhaseLink Corporation, a fabless semiconductor IC company specializing in high performance frequency timing generation solutions for digital consumer, communication, and storage products markets, today announced that Intel Capital, Intel Corporation's venture investment organization, has invested in the company for an undisclosed amount.

Cadol Cheung, Managing Director, Intel Capital Asia Pacific, stated: "By this investment Intel hopes to enable PhaseLink to bring new and innovative technologies to market."

PhaseLink is expected to use the funding to expand its market segment share in Timing Source ICs by accelerating technology development, strengthening its intellectual property portfolio, expanding its sales organization, and enhancing customer support services.

"This investment will better position us to meet the needs of our customers by delivering innovative, quality, reliable products. This is an approach built into everything we do", said D.C. Chang, CEO of PhaseLink Corporation.

PhaseLink has been a key contributor to the Frequency Generation and Synthesis markets, with many 'First to Market' products. Analog Frequency Multiplier, PhasorV, QTC (world's smallest and lowest power programmable clocks), Triangular Modulation EMI Reduction Clocks, etc., are just some of the broad product line offered by PhaseLink. High performance systems have stringent performance requirements on clock sources. Monolithic clock synthesizer chips from PhaseLink, by virtue of their ability to synthesize multiple frequencies with very high accuracy and multiple simultaneous outputs, can provide excellent solutions for these systems, while minimizing the costly inventory of crystal and crystal oscillators.

About PhaseLink Corporation

PhaseLink Corporation is the recognized leader in the mixed signal technology for timing source and signal conditioning ICs, in the area of Communications, Data Storage, Personal Computing, and Consumer Products. An innovator of many first to market products such as Analog Frequency Multipliers, Triangular Modulation SST, Bi-directional I/O, SMART-BYTE™ Programmable clock chip, lowest power and smallest programmable clocks, etc., PhaseLink offers one of the broadest IC product lines in the industry (XO, VCXO, Analog Frequency Multipliers, EMI reduction, programmable, Video, and LAN clocks).
